

ALLOY WHEEL COLLECTION

"IT IS WELL KNOWN THAT NOTHING IMPROVES THE LOOK OF A CAR MORE THAN A NEW SET OFF ALLOY WHEELS AND WHEN COUPLED WITH THE BEST QUALITY AND CORRECT APPLICATION IT CAN ALSO IMPROVE COMFORT AND PERFORMANCE"

Inside this catalogue you will find a hand selected range of alloy wheels picked and produced by professionals with over 40 years experience, the product within this catalogue will have something to suit all tastes, budgets and covers most of the modern cars available in Europe today.

So whether you own a Town car, Hot hatch, Van, Family saloon or SUV you will find something inside to suit.

CONTENTS

PAGE 4

FOX WHEELS

One of Europe's best selling and most innovative brand of alloy wheels since 1995, an extremely smart, sporty and excellent quality range of wheels to suit the majority of cars on the road today.

PAGE 14

RIVA UPGRADE ALLOYS

This contemporary range of wheels will give your car an upgraded image whilst maintaining an original look. Riva wheels suit most tastes and will certainly enhance the comfort and increase the value of your car.

PAGE 23

F.X M-SPORT

A race-look range of wheels with an aggressive look, the designs are track derived, Ultra lightweight and finished in various premium colours. You will notice a more precise steering and responsive handling after fitting a set of F.x wheels.

PAGE 28

NOVUS WHEELS

Brand new for 2017, NOVUS WHEELS. All models in the NOVUS range are produced using FLOW FORMING TECHNOLOGY. Flow Forming increased the strength, durability all whilst reducing the overall weight of the wheel.

NOVUS

ALL WHEELS IN THE NOVUS RANGE ARE PRODUCED USING FLOW FORMING TECHNOLOGY.

This new manufacturing process has a number of benefits compared to the usual standard casting:-

- ✓ Up to 25% lighter than standard production
- ✓ Up to 30% stronger than standard production
- ✓ Improved shock resistance
- ✓ Higher load ratings
- ✓ Increased elongation point & tensile strength

Flow Forming Technology involves the application of pressure to the inner barrel of the wheel while spinning after it has been cast. This process stretches and compresses the alloy, increasing the strength of the finished product.
